

Childhood Cancer Facts

1 Only 11 new drugs approved by the FDA for children with cancer in the same time period that nearly 300 drugs have been approved for adults with cancer

2 95% of adults treated for cancer as a child will develop a chronic medical condition, and have a 15-fold risk of developing congestive heart failure as a result of the treatments they received. It's not just enough for our kids to survive, but we need them to be able to thrive.

3 A commonly reported statistic is that 85% of the children in the U.S. diagnosed with cancer survive...unfortunately this survival rate is at the 5-year mark.
Many kids with cancer **STILL** have cancer at that point.
